Experience

Senior Software Engineer (Frontend) at [Aurora](#) | *San Francisco, CA* Jan 2023 - Present

- Served as the frontend architect and DRI for an end-to-end workflow management app (Orchestra), driving the product vision, xfn stakeholder alignment, and extensible system design to onboard new engineering workflows.
- Migrated Orchestra's data layer from SQL to OpenSearch via Zod schemas, server-side pagination, and an advanced filter DSL, boosting fetch times by 20% and slashing large query latency from 19.5s to 1.4s.
- Architected a data-annotation review workspace, building a generalized task-management UI framework that cut average Safety Performance Indicator (SPI) triage times from 12m to 5m (60% speedup).
- Refactored a sensor-data visualization platform (Lightbox) core architecture into service-oriented modules (PlaybackService, LayoutService), optimizing initialization logic to reduce startup latency by 15%.

Software Engineer (Mobile) at [Snap Inc.](#) | *San Francisco, CA* July 2021 - Dec 2022

- Designed and pioneered a shared Search UI platform for cross-team utilization.
- Collaborated with the Sharing team to enable users to search for on-device contacts, leading to a 25% increase in New User Link App Opens.
- Integrated Snapchat+ into Search through launchable Snapchat+ search results and badges.

Software Engineer (Intern) at [Apple](#) | *Remote* Aug 2020 - Dec 2020

- Enhanced company-internal tools, interfaces, and libraries to improve device failure diagnosis.
- Managed web app using Go, React, and GraphQL.

Personal Projects

Slumber | <https://useslumber.com/> | [App Store](#) May 2026 - Present

- Designed, built, and launched an iOS social sleep-tracking app on the App Store, enabling users to sync Apple HealthKit data and share annotated sleep logs with friends.
- Implemented a HealthKit aggregation pipeline supporting multi-device sources (Apple Watch, Oura, Garmin) with session grouping, stage normalization, and custom hypnogram visualization.
- Architected full-stack features — friends graph, sleep challenges, clubs, kudos/comments, push notifications.
- Built a React Native (Expo) mobile app with custom native HealthKit bridging, OAuth/magic-link auth, deep linking/universal links, and shareable sleep stat cards.

Ride Mates | <https://www.ridemates.org/> May 2025 - July 2025

- Built a real-time rideshare coordination web app utilizing Geolocation APIs to match nearby users headed toward the same destination for cost-sharing.
- Designed an ephemeral chatroom architecture using websockets to facilitate secure and transient communication among matched users for ride logistics.

Yearify | <https://yearify.org/> Nov 2024 - Jan 2025

- Developed and launched a full-stack data visualization platform integrating with the Google Calendar API (OAuth 2.0) to categorize and render a user's annual time allocation.

Education

University of California, Berkeley Aug 2017 - May 2021

- Bachelor of Computer Science | 3.4 GPA

Technical Skills

- Frontend & UI/UX: Typescript, React, React Native, Zod, MobX, Node.js, SwiftUI, Jest, Enzyme, Playwright
- Backend & Platforms: Golang, Python, Java, Objective-C, Kotlin, Gorm, Postgres
- Architecture & Tools: Bazel, Git, Jira, OpenSearch, Grafana, Mixpanel, Sentry, AB Testing, Copilot, Healthkit
